*Concerned* about the situation of the irradiated food worldwide, due to the lack of information that citizens have regarding this issue,

*Having in mind* the limit levels established by the international community and each countries radiation doses parameters,

*Keeping in mind* the consumers rights established by the United Nations,

*Confident* about the cooperation about different UN organizations such as:

- a. Food and Agriculture Organization
- b. United Nations Environment Program
- c. United Nations Educational, Scientific and Cultural Organization
- d. International Atomic Energy Agency

*Deeply Believing* in the multiple educational programs such as:

- a. Educational campaign
- b. Press Commercials
- c. Educational Seminars
- d. Supermarket Information

*Pointing out* the concerning regarding health and social risks that the workers may experience,

*Emphasizing* that each country is responsible to administrate their internal economic policy regarding this products;

The Nations,

1. Requesting all member countries of the UN to create awareness of their citizens about the irradiated food and its treatment and consequences as:

- a. Posting the information about the process of the food irradiation in supermarkets, markets, schools, Mass media advertising
2. Proclaims a international maximum doses of radiation in the food for exportation and importation of this products, being the limit of 7.5 kGy
3. Urges the people to interiorize the information affirming that the major responsibility of the citizens is to know what they are eating;
4. Proposes that the most development countries to publish the long term studies of the food irradiation with the concernment of the IAEA ;
5. Promoting exportation and trading of irradiated food as way to end issues such as famine and starvicity;
6. Calls Upon the trading of irradiation Technology, to the countries that are willing to develop their irradiation facilities in order to process food;
7. Guaranteeing the safety of the worker at the irradiation facilities thru an annual supervision of all the irradiation facilities operating;
8. Recommends each country to be aware about their economical estabality.
