

Delegation of the Islamic republic of Iran

In the name of god.

The most gracious and the most merciful.

“There are no secrets about the world of nature. There are secrets about the thoughts and intentions of men. “

Robert Oppenheimer in 1955.

The delegation of the Islamic republic of Iran is 100 % aware of the past, present and inherent risks of nuclear technology, This technology is well known by the international community with its disastrous results at the dark times of the world wars, a time when nuclear tech went into the wrong hands, people with the desire of destruction, when the potential of this technology was brought to its maximum exponent of evil.

the delegation of Iran is a firm believer that nuclear technology working with peaceful objectives and with the appropriate surveillance and security measures, as complacently given to this committee, are the answer to the question of whether nuclear technology is bad or not, and the answer is "no “.

NO delegates, nuclear technology with peaceful applications can lead Iran and the world to greater things, things such as renewable energy, cleaner and safer food, to the approaching of a greater good for the human race.

The delegation of Iran desires to be a model for the region and the world and to promote an all-inclusive disarmament. Those are the intentions of this honorable country, in the name of Allah.

Thank you honorable chair.
